Fishy Business

Overview:
A 2D restaurant management game that is a mix of idle games with added minigames to earn currency. The player runs a sushi restaurant with three stations: Chef, Roller, and Waiter with the goal to eventually unlock staff at each area. Each unstaffed station must be worked manually via minigame to earn currency. Once the player can afford to hire staff, that station automates and passively earns currency. Once all 3 stations are staffed, the restaurant runs as an idle game. The player can spend their currency on menu/upgrade unlocks like better sushi rolls, faster staff, faster production, or bigger tips from customers.

Controls:
The controls will be mouse only.

- Chef Station: click to stop an oscillating marker inside a "perfect cut" zone on a fish (timing bar).
- Roller Station: click ingredient icons in an order to assemble a sushi roll (order memory).
- Waiter Station: click on the correct table to serve them (whack-a-mole).
- Shop/Hire UI: click buttons for upgrades and hiring.
- Restaurant: click on different stations to play minigames.

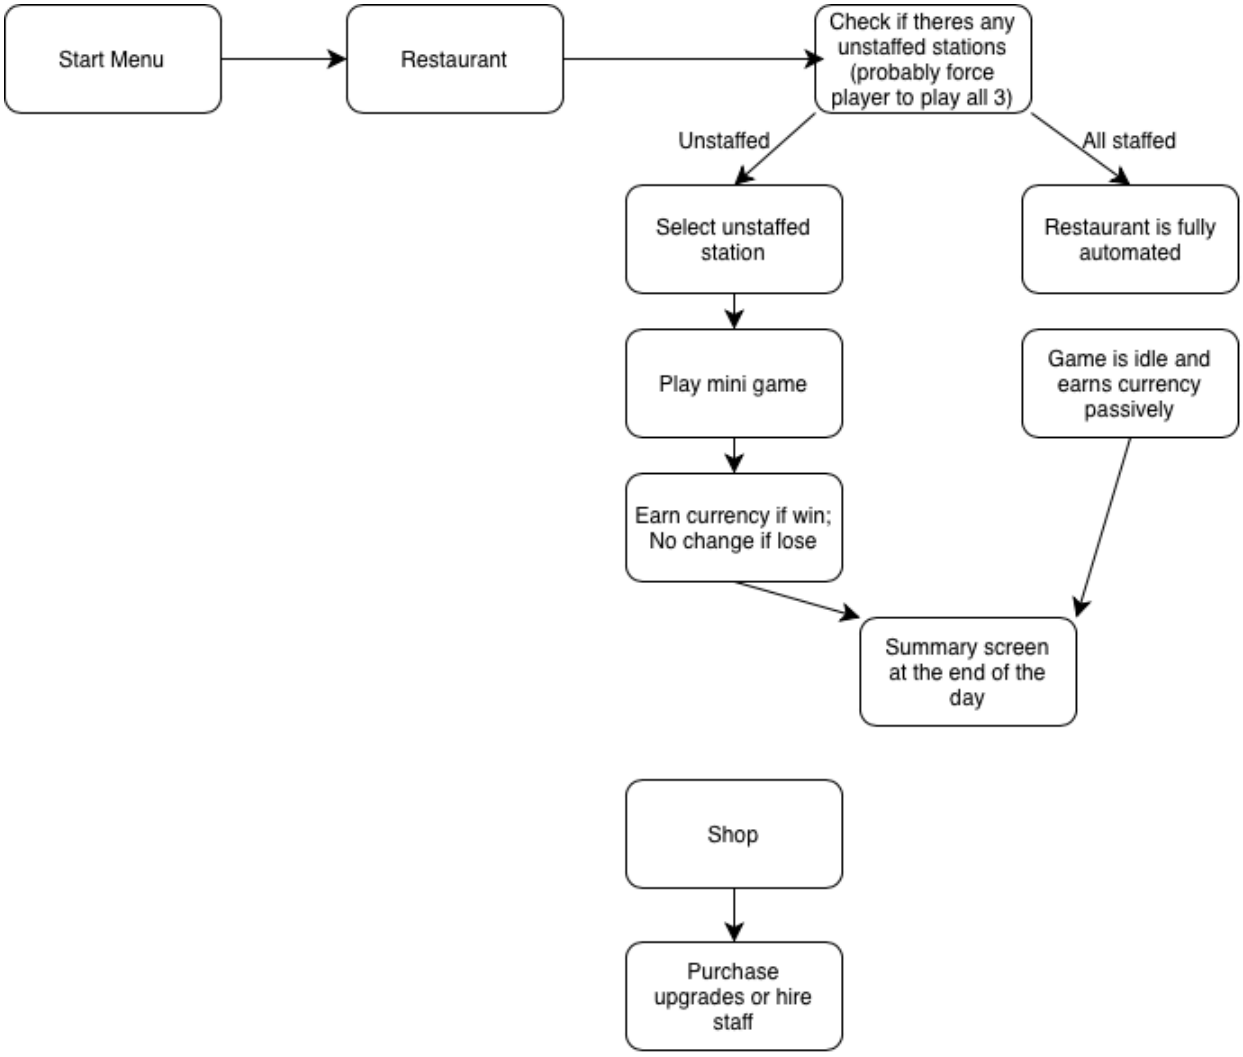

Art Assets:

- Restaurant Background (kitchen and dining area).
- Stations for Chef, Roller, Waiter: staffed and unstaffed
- Chef: cutting bar, marker, fish.
- Roller: ingredients, completed sushi roll.
- Waiter: table icons, customers.
- Staff icons for each hired role.
- UI: currency display, shop, hire buttons, menu and upgrade icons.

Audio Assets:

- Background ambience in Restaurant
- Different music for each minigame
- Click sound effect
- Success chime
- Miss sound effect
- Hire sound effect

Game Flow:

Concerns:

- Balancing hire costs and payouts from minigames
- Making the mini games semi difficult, maybe make it more difficult as game progresses
- Getting assets that look good together
- If making 3 mini games is too time consuming or if the project is too ambitious
